

Challenger®

Gone are the days when the role of a tractor is to simply pull an implement or operate a loader. Today's progressive growers and managers need a machine that can also improve efficiency, boost productivity and aid in management, whether it's used on the farm, the construction job site or the municipal grounds. Bottom line...it should help improve profitability.

On the other hand, today's fast-paced workload still calls for a mid-sized tractor with the power to handle a wide variety of jobs and the comfort to enhance operator productivity. Throw in a longing for the best dealer support in the industry and there's only one name left...Challenger®.
