

ADVANTAGE HST (HYDRAULIC SLIDING TAIL)

While each Trail King Trailer model may possess its own unique features, functions and applications that are designed to address particular hauling requirements, they also have several things in common. All Trail King trailers go through an exacting design process and, because they are rated at true load capacity at highway speeds, you can be confident that your Trail King trailer will haul what it says it can haul.

Trail King electrical systems feature rubber-mounted, shock-proof, sealed lights and rubber grommets wherever wiring runs through the frame for a longer, trouble-free, low maintenance performance life.

Trail King trailers are primed and painted with a two-component polyurethane primer and paint before decking is installed. So, the entire trailer has protection from the elements — even in places you can't see.

But the most important shared characteristic...Every Trail King trailer is engineered and manufactured to deliver uncompromised quality, dependable performance, and unsurpassed value.

REAR TAG

ADVANTAGE HT (HYDRAULIC TAIL)

ADVANTAGE SERIES HYDRAULIC
