

FULL SERVICE HYDRAULICS

Incorrect load settings and contamination
can harm performance up to 20%!

PUMPS & MOTORS

Today's construction machinery hydraulic systems are more complicated and more sensitive to correct settings and contamination, especially electro-hydraulic valves, pumps and motors. Finding someone you trust to repair your problems quickly and correctly saves time and money.

HOSES AND FITTINGS

Contamination kills, and each hose at Kelly Tractor is pneumatically cleaned with a foam core plug before fittings are installed...even new ones! Ask to see your plug so you can see how much dirt is removed. Low, medium or high pressure hoses are available with standard or reusable fittings.

30-minute turnaround or you will receive a Free Cat® hat.

VALVES

We have the knowledge and parts to typically repair valves for less than replacement cost. We also test them under pressure before re-installation. Remember, "hydraulic system" means everything must work together properly for maximum performance on the job. We know valves, pumps and motors.

CYLINDERS AND RODS

Many of today's Excavator cylinders have new retention nut torque requirements for proper operation. Don't guess at the correct torque settings. Wrong torque equals wrong performance. Kelly Tractor repairs cylinders from 1.5 inches to 12 inches, with rods to match. All replacement rods are IHCP (induction hardened chrome polished), which are harder and last longer. A large inventory on hand aids fast turnaround.

We work on Cat® and aftermarket cylinders.

Every re-sealing job includes a cylinder honing for better fit, performance and life. Most cylinders can be saved by over-sizing them and using matched seal kits.

Don't repair your cylinders and rods just to finish the job...or you may repair again soon. Repair to last and get return on your hydraulic investment!
